Open Letter to DOJ Re: Microsoft Settlement

28 January 2002

Ms. Hesse,

Please find below a joint open letter signed by 2366 people from across the United
States. I composed the open
letter and offered to collect signatures by email
as a simple way for people to express their views on the Proposed Final Judgment.

I certify that the following list of names was compiled from email sent to
petition@kegel.com; that return
email was used to provide some small degree of
assurance that each submission came from a valid email address; and that I have
verified to the best of my
ability that all co-signers are US residents or
citizens.

I am sending the document (http://www.kegel.com/remedy/remedy2.html) referenced in the
joint open letter under
separate cover as my personal Tunney Act comment.

Sincerely,
Dan Kegel

Antitrust Division
U.S. Department of Justice

Suite 1200

Ms. Hesse,

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. We
agree with the problems
identified in Dan Kegel's analysis (on the Web at
http://www.kegel.com/remedy/remedy2.html), namely:

    * The PFJ doesn't take into account Windows-compatible competing operating systems
          o Microsoft increases the Applications Barrier to Entry by using restrictive
license terms and
intentional incompatibilities. Yet the PFJ fails to
          prohibit this, and even contributes to this part of the Applications Barrier
to Entry.
    * The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
          o The PFJ supposedly makes Microsoft publish its secret APIs, but it defines
"API" so narrowly that

many important APIs are not covered.
        o The PFJ supposedly allows users to replace Microsoft Middleware with
competing middleware, but it
defines "Microsoft Middleware" so narrowly that the
        next version of Windows might not be covered at all.
        o The PFJ allows users to replace Microsoft Java with a competitor's product
        -- but Microsoft is replacing Java with .NET. The PFJ should therefore allow
users to replace
Microsoft.NET with competing middleware.
        o The PFJ supposedly applies to "Windows", but it defines that term so
narrowly that it doesn't cover
Windows XP Tablet PC Edition, Windows CE, Pocket
        PC, or the X-Box -- operating systems that all use the Win32 API and are
advertised as being
"Windows Powered".
        o The PFJ fails to require advance notice of technical requirements, allowing
Microsoft to bypass all
competing middleware simply by changing the
        requirements shortly before the deadline, and not informing ISVs.
        o The PFJ requires Microsoft to release API documentation to ISVs so they can
create compatible
middleware -- but only after the deadline for the ISVs
        to demonstrate that their middleware is compatible.
        o The PFJ requires Microsoft to release API documentation -- but prohibits
competitors from using this
documentation to help make their operating
        systems compatible with Windows.
        o The PFJ does not require Microsoft to release documentation about the format
of Microsoft Office
documents.
        o The PFJ does not require Microsoft to list which software patents protect
the Windows APIs. This
leaves Windows-compatible operating systems in an
        uncertain state: are they, or are they not infringing on Microsoft software
patents? This can scare
away potential users.
    * The PFJ Fails to Prohibit Anticompetitive License Terms currently used by
Microsoft
        o Microsoft currently uses restrictive licensing terms to keep Open Source and
Free Software apps from
running on Windows.
        o Microsoft currently uses restrictive licensing terms to keep Windows apps
from running on competing
operating systems.
        o Microsoft's enterprise license agreements (used by large companies, state
governments, and
universities) charge by the number of computers which could
        run a Microsoft operating system -- even for computers running competing
operating systems such as
Linux! (Similar licenses to OEMs were once banned
        by the 1994 consent decree.)
    * The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by
Microsoft
        o Microsoft has in the past inserted intentional incompatibilities in its
applications to keep them
from running on competing operating systems.
    * The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs
        o The PFJ allows Microsoft to retaliate against any OEM that ships Personal
Computers containing a
competing Operating System but no Microsoft operating
        system.
        o The PFJ allows Microsoft to discriminate against small OEMs -- including
regional 'white box' OEMs
which are historically the most willing to install
        competing operating systems -- who ship competing software.
        o The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based
on criteria like sales

of Microsoft Office or Pocket PC systems. This
            allows Microsoft to leverage its monopoly on Intel-compatible operating
systems to increase its
market share in other areas.
    * The PFJ as currently written appears to lack an effective enforcement mechanism.

We also agree with the conclusion reached by that document, namely that the Proposed
Final Judgment, as
written, allows and encourages significant
anticompetitive practices to continue, would delay the emergence of competing
Windows-compatible operating
systems, and is therefore not in the public interest.
It should not be adopted without substantial revision to address these problems.
